Introduction

Data from the surveys and studies conducted by the National Center for Health Statistics are presented in a variety of publications. Many of the reports are part of the *Vital and Health Statistics* series, which now includes over 500 individual publications grouped into several subseries. Other Center data are published in *Advance Data From Vital and Health Statistics*, a publication series begun in 1976 as the means for early release of selected findings from Center surveys. Most *Advance Data* reports are followed by detailed publications in the *Vital and Health Statistics* series. The Center also issues periodicals such as the *Monthly Vital Statistics Report*. Center data are presented in special publications as well; they are identified in this catalog as "Other Publications of the National Center for Health Statistics."

This catalog is divided into two parts. Part I presents a listing of Center reports from 1980 through 1984.

Part II of the catalog is an index to selected health topics covered in Center reports. It is in two sections. Although there is some overlapping, section I in general includes topics and variables related to the health status of the population. Section II covers the characteristics of health facilities and occupations. The index is not exhaustive, but it treats in detail those topics and variables most frequently requested by users of Center data.

In the spring of 1981, the Center implemented a new policy that limits the free distribution of certain Center publications — *Vital Statistics of the United States, Vital and Health Statistics* series, and most miscellaneous reports — to libraries and other selected institutions. All other data users may purchase these items from the U.S. Government Printing Office (GPO). Reports published since the implementation of this policy are listed by series or in the "Other Publications" section of this catalog with GPO stock numbers and prices shown. To order these reports individually or to establish a standing order for one or more series, contact

While supplies last, those series reports and major miscellaneous reports printed prior to the new Center distribution policy are available free of charge from the National Center for Health Statistics. *Monthly Vital Statistics Reports, Advance Data*, and other periodicals, as well as catalogs and listings, are still free to all users. The Center also maintains a number of mailing lists for distribution of its reports, and the mailing list form can be obtained from the address given below.

Additional data collected by the Center are available in the form of public use data tapes and unpublished tabulations. Questions about the availability of Center data, both published and unpublished, can be addressed to the following:

Part II: Index to health topics

Health, United States, is the comprehensive annual report to Congress from the Center on the health of the Nation. Although not mentioned in the index, ***Health, United States,*** presents data on most of the topics indexed.

Guide to terms in the index

Acute conditions — Virus; colds, flu, and other respiratory conditions; headaches; gastrointestinal disorders and other digestive conditions; accidental injuries; genitourinary disorders; diseases of the skin; and other acute conditions.

Chronic conditions — Major categories of chronic illness such as heart disease, hypertension, arthritis, diabetes, ulcers, bronchitis, and emphysema.

Chronic limitation of activity — A limitation in the amount or kind of activity that can be performed. A measurement of the impact of illness on ability to carry out normal activities, such as keeping house, working, or going to school.

Chronic limitation of mobility — Confinement to home or bed or trouble in getting around.

Dietary intake — Intake of nutrients, consumption of foods, caloric intake, and other nutrition findings.

Geographic area — Usually the four regions of the United States — Northeast, North Central, South, and West.

Impairments — Physical impairments such as vision, hearing, or speech defects; absence of limbs; paralysis; and other orthopedic impairments.

Physiological measurements — Blood pressure, blood glucose, serum cholesterol, and other physiological measurements.

Place of residence — A general urban or rural classification of residence such as standard metropolitan statistical area or outside SMSA.

Prevention — Practices associated with disease prevention and health promotion, including physician visits, prenatal care, and daily health habits.

Psychological measurements — Primarily results of tests of intellectual or emotional development.

Special aids — Wheelchairs, walkers, canes, crutches, artificial limbs, and other devices.
